and Insertion of Contact Lenses Proper handling is paramount to avoid contamination and injury. Washing Your Hands Always wash your hands thoroughly with soap and water before handling your lenses. Avoid using lotions or creams as they can contaminate the lenses. Dry your hands with a lint-free towel. Removing the Lens from the Case Gently remove the lens from its case using your index finger and thumb. Examine the lens for any debris or damage before insertion. Lens Orientation Ensure the lens is right-side out. A properly oriented lens will have a smooth, bowl-like appearance. An inverted lens will appear more peaked. Insertion Position the lens on the tip of your index finger and gently pull down your lower eyelid with your middle finger. Look up and carefully place the lens onto the cornea. Release your eyelids and blink gently. If insertion is proving difficult seek guidance from your eye care professional. Improper insertion can lead to discomfort or even corneal abrasion. Removal and Cleaning of Contact Lenses The cleaning procedure will differ based on the type of lens you use. Generally the steps include: Removing the Lens Gently pull down your lower eyelid and use your index finger and thumb to carefully remove the lens from your eye. Cleaning for reusable lenses: Using a lens cleaning solution and a rubbing motion carefully remove any debris from the lens surface. Follow the instructions provided with your specific cleaning solution. Never use tap water. Rinsing Rinse the lens thoroughly with the multipurpose solution. Storing Place the cleaned lens in a fresh solution in a clean lens case. Never reuse old solution. Daily disposable lenses do not require cleaning. Simply discard them after each use and replace them with a fresh pair. Failure to adequately clean and store reusable lenses can lead to the buildup of debris and bacteria increasing the risk of eye infections like keratitis. Common Problems and Solutions Even with careful handling some issues might arise. Dry Eyes This is common especially with certain lens materials. Using lubricating eye drops can alleviate dryness. Discomfort If you experience persistent discomfort remove the lens immediately and consult your eye care professional. The lens might be damaged, improperly fitted or you might have 3

an eye irritation. Lens Deposits Proper cleaning is crucial to prevent protein and lipid deposits which can affect vision clarity and comfort. Lost Lens If you lose a lens, don't panic. Try retracing your steps and if unable to locate it, contact your eye care provider. Contact Lens Materials A Closer Look The material of your contact lenses greatly impacts their comfort, wear schedule, and care routine. Common materials include Hydrogel. These lenses are generally more affordable but may not allow as much oxygen to reach your cornea. Silicone Hydrogel These lenses are more breathable, allowing for more oxygen transmission, making them suitable for extended wear. However, they often come with a higher price tag. Always refer to your lens packaging and the instructions provided by your eye care professional for specific details on your lenses' care requirements. Key Takeaways Understand your prescription. This information is crucial for proper lens selection and care. Practice proper hygiene. Always wash your hands thoroughly before handling lenses. Follow cleaning instructions. Adhere strictly to the care instructions for your specific lens type. Address discomfort promptly. Don't hesitate to consult your eye care professional if you experience any problems. Regular checkups. Schedule regular eye exams to monitor your eye health and lens fit. Frequently Asked Questions FAQs 1. Can I use tap water to rinse my contact lenses? Absolutely not.
